PRECISION. SHARPNESS. SUCCESS.
exactly

Reasons why you need LUTZ BLADES:

PRECISION.

Our maxim is precision – and it is this principle that accompanies every stage from the initial idea to the finished product. Right through to the ideal solution for your specific cutting application to ensure your requirements are met. Throughout every design and development stage and every production step – blade after blade after blade.

SHARPNESS.

We have been making blades and cutters since 1922. From razor-sharp, for extremely fine cutting jobs to extremely robust for impact and pressure cutting actions. Together with the customer, we define all the relevant parameters to ensure your individual requirements are met – to provide greater sharpness and better service lifetimes.

SUCCESS.

exactly

Your competitive advantage when you use blades from LUTZ in medical technology is the sum of all our efforts and the details we guarantee you. We are pleased to show you those details because your success is our objective – from the first to the millionth blade.

LUTZ MEDICAL BLADES

Thanks to their precision, high-grade craftsmanship and outstanding service lifetimes, LUTZ blades are in use in numerous medical contexts with market leaders.

Typical fields are surgery, pathology and in the manufacture of PVC catheters and stents.

Our production range includes, amongst others: ophthalmology blades, microdissection cutters, trocars for laparoscopy, punched blades for biopsies, precision and special-purpose blades for histology and dermatology, blood lancets, blades for precision incisions in PVC tubes, stents and powder inhalers.

AND THIS IS HOW YOU CAN BENEFIT FROM LUTZ BLADES AND LUTZ CAPABILITIES

- » Accurate cutting action and consistently excellent cutting quality
- » High cutting efficiency
- » Initial samples after only a few days and without tooling costs
- » Traceable thanks to identification marks on each individual blade

FEATURES OF LUTZ AND ITS PRODUCTS

- » Processes comply with EN ISO 13485:2007 and EN ISO 9001:2008
- » Rapid prototyping
- » Automatic measurement and testing of all critical parameters
- » Certified suitable for cleanroom use
- » Comprehensive materials portfolio from rust-resistant to ceramic
- » Hard and frictionless coatings designed to match the specific application

CHOICE OF MATERIAL

Our range of products covers blades of between 0.06 and 3.0 mm in thickness and with final hardness ratings of 40 - 85 HRc.

- Our range of materials includes:
- » Carbon steels
 - » Stainless and rust-resistant steels
 - » Highspeed steels (HSS)
 - » Tool steels
 - » Tungsten carbides
 - » Ceramics

COATINGS

The LUTZ coatings range includes the following choices:

TiN

Standard hard coating with tough resistance to wear with a relatively high coefficient of friction (compared with steel as a reference material: 0.4 to 0.7), usually gold coloured, safe use at up to approx. 300 °C.

TiC

Has lower resistance to wear than TiN and a considerably lower coefficient of friction (compared with steel as a reference material: 0.3 to 0.5), usually charcoal grey.

TiCN

Takes a position between the high wear resistance of TiN and the low coefficient of friction of TiC, relative position between TiN and TiC depending on C and N content, usually charcoal grey.

TiAlN

Has greater resistance to oxidation than TiN with a comparable coefficient of friction, usually charcoal grey.

ZrN

With wear resistance similar to TiN, but with a more dense morphology than TiN and, as a result, more resistant to pitting under comparable load, usually steel colour.

CrN

Lower wear resistance than TiN. The advantage of CrN is it has a lower inherent tension than TiN. As a result, can be used for applications with high bending loads.

DLC

Has a high wear resistance and a low coefficient of friction (approx. 0.4 compared with steel as a reference); sensitive to impacts and high temperatures (between 100° and 300 °C depending on structure).

Teflon® (PTFE)

Non-stick coating Teflon® (PTFE), very low static friction allows a smooth cut, therefore a popular coating for medical devices. Because of the low surface tension almost no contamination from the cut goods. Acid and base-resistant, not suitable in combination with Na (sodium). Temperature resistant up to 250°C (480°F). Medium wear resistance.

Coloured lacquer

Applied to entire surface, acts as an aid to sorting different material thicknesses and as anticorrosion protection.

Bluing and blackening

Applied to entire surface, some anticorrosion protection and thickness protection, also aids differentiation.
